# FOR THE DELIGHT OF THE EYES

● **MB&F + L'EPÉE 1839 MEDUSA**

Its dome and glass tentacles – blue, green or pink, 50 pieces per colour – are hand-blown in Murano. It can be hung from the ceiling or placed on a desk, but whichever way you choose, it looks superb. This fascinating Medusa is not only an astonishing object: it also houses a movement made up of two rotating rings, one for the hours and the other for the minutes. These are driven by a mechanical movement beating at 2.5Hz, constructed along a vertical axis “mimicking the

radial symmetry of a jellyfish's neural column” and placed just below the time indication. In the darkness, the Medusa glows with a light that evokes images of the sea bottom. This bewitching mechanical glass creature is the result of collaboration between the designer Fabrice Gonet, MB&F and L'Epée 1839. This is the tenth collaboration between MB&F and the Swiss clockmaker who, together, have totally renewed the genre. CHF 25,500
